The REHAU Two-Part Retrofit Window Sill

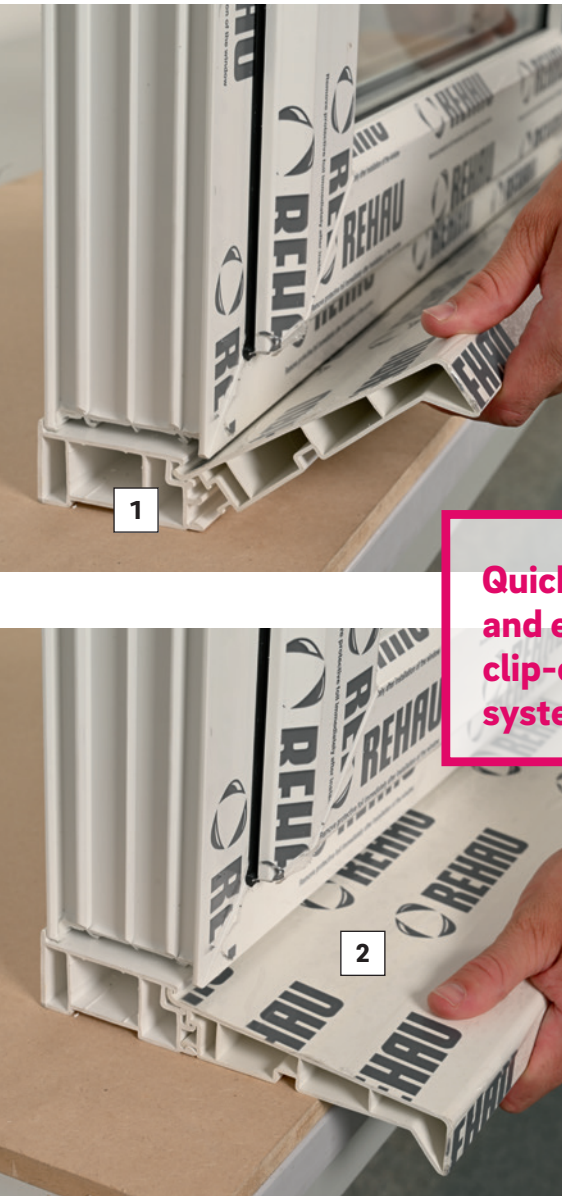

Today’s housebuilders and commercial developers are under mounting pressure to deliver projects quicker than ever. As a result, modular buildings, offsite construction methods, and the need to avoid snagging issues have grown in importance.

For the perfect finishing touch

In response, REHAU has developed the Two-Part Retrofit Window Sill; a window sill designed to be installed at the very end of a build, once the risk of any on-site damage has passed.

Offering vital flexibility to fabricators, installers, and builders alike, REHAU’s Two-Part Retrofit Window Sill boasts a host of features designed to add a finishing touch to any new window – and indeed any residential or commercial build project.

Description	Length m	Article No.	Pack Quantity m
Sill	6	330555-701	24m
150mm Sill Nose	6	330565-701	24m
180mm Sill Nose	6	330575-701	24m

1 Base unit
2 Clip-on sill

Keeps water out and brickwork dry
A simple and effective built-in drainage channel ensures any water that does get into the window can drain away easily without risking damage to the property’s brickwork.

Avoids expensive replacement work
The two-part retrofit window sill is REHAU’s response to the number of traditional one-piece window sills which are damaged on-site by construction work.

Completely secure
Once clipped into place, the window sill is completely secure, which reduces the risk of snapping.

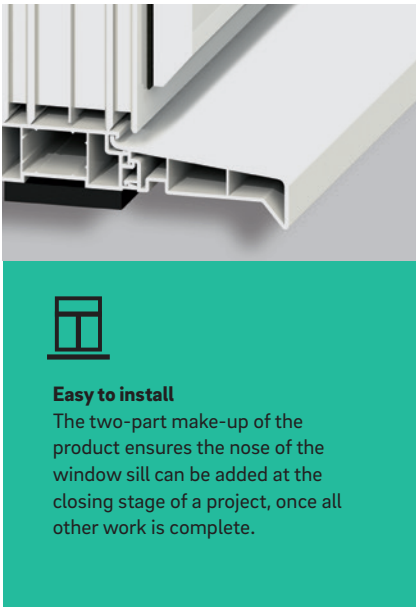

Easy to replace
In the event of damage occurring, the nose of the two-part sill can be easily replaced without the need to disturb the window itself.

Supplied in protective tape
Every two-part retrofit window sill arrives wrapped in a protective tape to keep it in pristine condition on-site until it is ready to be revealed.

Perfect for offsite construction
For walls built offsite, the prominent window sill nose can be clipped on after delivery and assembly, at the closing stages of a project – ultimately avoiding the risk of any damage in transit.

Easy to install
The two-part make-up of the product ensures the nose of the window sill can be added at the closing stage of a project, once all other work is complete.
